

# Emergency Preparedness at the Municipal Level

*Multi Risk International* uses a coaching-based approach that favours close collaboration with the client in order to facilitate knowledge transfer. This approach increases the autonomy of personnel once the process is completed. It provides tangible results and ensures the timelines are respected.

The *Multi Risk International* approach reflects the *Loi sur la sécurité civile du Québec*, federal regulations on Environmental Emergencies (CEPA 200) and international standards and best practices (for examples : SEVESO II directives, EPA-RMP, OSHA-PSM, NFPA 1600, CSA standards, etc.) It emphasises the six dimensions of risk management : prevention, mitigation, preparedness, response, continuity/recovery, management and communications. Our flexible approach promotes the emergence of a risk management culture within organisations and takes into account the organisation's vision, objectives, dynamics and context.

Our successful achievements at the municipal level include :

- Risk and vulnerability assessments
- Consequence evaluations
- Development of prevention and mitigation programs
- Emergency planning and business continuity planning
- Risk communication activities and plans
- Stakeholders consultation and joint planning
- Development of exercises and training programs
- Design and delivery of training activities
- Development and delivery of exercises and simulations

**Why choose *Multi Risk International*?** Our team has wide experience working with municipal organisations and in the implementation of complete emergency preparedness programs. Our effective and adapted approach will allow you to :

- Optimise your efforts in emergency preparedness
- Demonstrate your leadership to the community
- Respect regulation
- Respond effectively to disasters
